Standard NMI Lap & Diagonal Inertia Belts: User Instruction Leaflet

To be operated by trained personnel only

Setting up and applying the passenger safety belts 2: Preparing belts

1: Mounting reel and stalk features to the floor tracking

Mount the real and stalk devices by Inserting the Plunger Stud Fitting (A) into the floor tracking

(Install the straps device with the burgundy seatbelt nearest to the rear of the wheelchair)

Applying the passenger safety belts

Pull black strap nearest the wheelchair up and across lap of passenger, passing strap through sides of wheelchair for maximum security and put into the stalk buckle D

Pull the burgundy strap up and over shoulder, diagonally down across chest and reconnect the two belts (E)

Adjust the comfort clip to be positioned and locked against the casing. This alleviates downward pressure on the occupant's shoulder and stops the belt cutting across the neck (see Section 3)

Slide the Plunger Stud Fitting until plunger B drops into a hole in the floor tracking. The device is now locked in the floor tracking

Separate belts by pressing buckle button C and while pulling apart

Unlock comfort clip by pulling the two larger ends apart

4: Adjust comfort clips

Unlock comfort clip by pulling the two larger ends apart

Once clips are at the bottom

they can be locked by pushing the two larger ends together. These will make the belt straps feel less tight for the user. The passenger is now secure

p1 of 1 Helping more people to travel in safety and comfort

16 IO Centre, Arlington Business Park, Whittle Way, Stevenage, Hertfordshire, SG1 2BD Tel. +44 (0)20 8801 5339/5512 Fax. 01438 367 829 Email: sales@nmisafety.com Web: www.nmisafety.com

Releasing the passenger & removing the restraint devices

To release the passenger unlock the comfort clip. Disconnect burgundy strap from black belt and hold strap until its retracted into the reels to avoid whiplash. Repeat when unbuckling the black belt

To remove the reel and stalk features pull up Plunger B. slide Plunger Stud Fitting A till the unit aligns with the holes in the track. When aligned the device can be lifted out
